

Environmental policy

Management of the Clinical Center of Banja Luka is committed to a system of managing the environment in accordance with environmental standard ISO 14001:2000

In accordance with the commitment, all the employees in the Clinical Center will continuously work on the implementation and improvement of the following activities:

- Identify and put under the control all their activities that have or may have a significant impact on the environment.
- carry out their activities in accordance with the procedures, regulations and laws on environmental protection.
- economize resources and energy, reduce use of harmful substances and the amount of hazardous waste.
- Develop, implement plans, programs and review procedures for the identification of potential harmful aspects related to environmental protection.
- Investigate opinions, suggestions of all interested parties and take appropriate measures to improve environmental protection.
- Inform your business partners and other stakeholders about your own commitment to environmental protection.
- Procure products that do not have, or have a minimal impact on the environment, and encourage suppliers to the active application of all measures to protect the environment, including the use of standard ISO 14001 in their operations.
- Take care of informing users about safe use of all products and services.
